

The Formentera Council's infrastructure and mobility offices report that a central Sant Ferran thoroughfare will be closed to vehicle traffic during upgrades in the centre of town. From Monday, January 29, motorists will be temporarily unable to circulate or park along carrer Guillem de Montgrí, a road linking the main road (also known as avinguda Joan Castelló Guasch) with the es Pujols roundabout.

The following steps are being taken to minimise inconveniences caused by the closure:

Access to the Sant Ferran school; no changes. Even with carrer Guillem de Montgrí closed, drivers can use carrers Sant Jaume and Tarragona to reach the school.

Access to carrer Major; drivers can access carrer Major from the north by way of the es Pujols roundabout.

Access to pedestrian-only streets; carrers Mallorca, Menorca and Havana can all be accessed by way of carrer Alacant, which will accommodate traffic both ways during construction.

Motorists must use the roundabout to reach southern parts of Sant Ferran and es Pujols.

To minimise the inconveniences to residents and businesses, an overflow car park was opened in early December to accommodate 70 vehicles. It can be accessed from the roundabout.

Work is expected to be completed by April 30. The initial phase of the project began Wednesday, January 10. An expanded stage will begin Monday, January 29, and additional upgrades will take place along carrer València.
